

THEME 11: HIV/AIDS and Gender In..

A multitude of inequities drives the HIV epidemic, but gender inequality is a major contributor to the continued spread of HIV globally: "HIV is not only driven by gender inequality, but it also entrenches gender inequality, leaving women more vulnerable to its impact."

"Early and forced marriage, gender-based violence, unequal access to information, including sexual health knowledge, and a lack of negotiating power and economic autonomy are among the factors that place women and adolescent girls at increased risk of HIV infection."

1.5M

Approximately **1.5 MILLION PEOPLE** are living with HIV in 2019 in Africa.
